PROFESSIONAL SUMMARY

AI / Machine Learning Engineer with an MSc in Artificial Intelligence and a Microsoft Azure Developer Associate certification, specialising in designing, building and deploying end-to-end machine-learning systems in Python. Experienced across the full ML lifecycle data and feature engineering, model fitting, validation and live hosting using scikit-learn, PyTorch, TensorFlow, XGBoost and Hugging Face. Has delivered production ML applications on multi-million-row datasets, alongside LLM-powered AI agents built with LangChain and the Anthropic and OpenAI APIs. Combines strong software-engineering foundations with a track record of producing reliable, well-documented, privacy-aware systems that turn complex models into usable decision-support tools.

TECHNICAL SKILLS

Languages: Python, SQL, R, C#, JavaScript

Machine Learning & Deep Learning: scikit-learn, TensorFlow, PyTorch, Keras, XGBoost, Random Forest, regression, neural networks; model training, evaluation, hyperparameter tuning & feature engineering

Time-Series Forecasting: ARIMA, SARIMA, Prophet, Holt-Winters, statistical baselines

NLP, LLMs & AI Agents: Hugging Face Transformers, LangChain, Retrieval-Augmented Generation (RAG), prompt engineering, Anthropic (Claude) & OpenAI APIs, computer-vision inference

Data & Analytics: Pandas, NumPy, Matplotlib; large-scale & chunked data pipelines, exploratory data analysis, data visualisation

MLOps & Deployment: MLflow, FastAPI, REST APIs, Docker, Git & GitHub; model deployment & monitoring, Hugging Face Spaces (Gradio / Streamlit), Netlify, Vercel, n8n

Cloud Platforms: Microsoft Azure (Developer Associate), Microsoft 365, Google Colab, AWS, Google Cloud

PROFESSIONAL EXPERIENCE

Forward Deployed AI Engineer
Jul 2026 - Oct 2026

Where You At Ltd (WYA), London – Contract

- Replaced a manual board report with a probability-weighted pipeline dashboard (n8n, HubSpot, Postgres) backed by 117 automated tests; its data audit found £725k of deals missing from the totals.
- Shipped a React-based Venue ROI Simulator modelling food-and-beverage queues and spend per head with and without FlexNet, with a lead-capture gate; presented at the company all-hands.
- Automated sales admin with n8n and Claude: call memos and follow-up drafts from Fireflies transcripts behind a Slack approval gate, plus a LangChain Slack assistant for HubSpot queries.
- Built Client Hunter, a lead-generation tool that researches prospects, drafts tailored email and LinkedIn outreach, and writes qualified leads directly into HubSpot.
- Built a top-down market-size model and investor-facing website for the leadership team.

Junior AI Engineer
May 2025 – May 2026

Web Tackles, UAE – Part-time

- Built production machine-learning applications in Python end-to-end from data preparation and exploratory analysis through model fitting and validation to live deployment across 2 cloud platforms (Hugging Face, Netlify).
- Productionised 2 risk-scoring models credit-risk and mortgage-arrears as interactive Hugging Face Spaces, letting non-technical users score cases in real time via a Gradio / Streamlit UI.
- Cut manual effort on routine email by building an LLM reply agent (LangChain, Anthropic & OpenAI APIs) that auto-sends high-confidence replies and routes uncertain cases for human review.

- Processed 10M+ rows of structured data and monitored model performance, raising reproducibility and reliability through documented, version-controlled pipelines in a cross-functional team.

Software & Game Developer (Unity / C#) *2019 - 2024*
Freelance (Upwork, Fiverr) & Caffeine Studios

- Delivered software and interactive 3D / AR projects for international clients over 3+ years, earning Top Rated status with a 100% job-success score on Upwork and a 5-star rating on Fiverr.
- Implemented game mechanics, UI / UX, real-time multiplayer (Mirror Networking) and AR (Vuforia) features in C# / Unity, running on 3 platforms (Windows, Android, iOS).
- Maintained coding standards, Git version control and clear documentation while collaborating cross-functionally and liaising directly with clients to meet deadlines.

KEY PROJECTS

NHS Elective Waiting-List Forecasting & Decision-Support Tool — nhswaitinglist.netlify.app
(MSc Dissertation)

- Architected an end-to-end forecasting pipeline over ~10.6 million rows of NHS England RTT data, aggregating to hospital × specialty × month level (thousands of time series) via memory-efficient chunked processing.
- Benchmarked 7 forecasting models Ridge regression, Random Forest and XGBoost against Holt-Winters, ARIMA, SARIMA and Prophet plus naive baselines, to identify the strongest 12-month predictors.
- Launched a privacy-preserving web app with interactive dashboards and area-level comparisons, running 100% of computation client-side so nothing is uploaded or stored.

Gmail-Integrated AI Email-Reply Agent

- Engineered an LLM-powered agent with 2 reply modes autonomous and assisted that reads, drafts and sends Gmail replies, using confidence thresholds to auto-handle high-confidence messages and escalate the rest for review.
- Integrated the Gmail API with prompt-engineered LLM calls to reduce time spent on routine correspondence while keeping a human in the loop.

AI Image-Authenticity Detector

- Developed a React application that classifies AI-generated versus authentic images via a vision-model API, overlaying heatmaps that pinpoint the regions driving each prediction.

ML Risk-Prediction Apps — German Credit Risk & UK Mortgage Arrears
huggingface.co/HammadRehman

- Published 2 interactive ML risk-prediction Spaces on Hugging Face (German credit-risk and UK mortgage-arrears), owning the workflow from dataset preparation to model building and hosting.

EDUCATION

MSc Artificial Intelligence Technology *2025 - 2026*
Northumbria University, London

- Studied 4 taught modules Machine Learning with Python; Design, Development & Testing of Software using AI; IoT Peripherals & Data Analytics; Typology of Innovation.
- Dissertation: AI-based forecasting of NHS elective waiting lists on a ~10.6 million-row dataset.

BSc (Hons) Software Engineering *2019 - 2023*
Lahore Garrison University, Pakistan

- Coursework: Data Structures, Algorithms, Database Systems and software development.

CERTIFICATIONS, LEADERSHIP & ACHIEVEMENTS

- **Microsoft Certified: Azure Developer Associate** (Microsoft Azure cloud development).
- **President, Game Development Society** Northumbria University Students' Union.
- **London Recognition Award** Societies Awards 2026, Northumbria University.
- Python for Data Science & Machine Learning Essential Training; Prompt Engineering: How to Talk to the AIs.

Languages: English (Fluent, IELTS Academic 6.5 / B2) • Urdu (Native)
